## CONTAINMENT BOOMS

Unlike any other system available worldwide, our **CUBISYSTEM®** containment booms are made of floating cubes attached to one-another.

The unique advantages of this system are:

- Unlike other systems available today, our floating barriers can not be broken or getting loose in the choppy water.
- Oil can not lap over the containment booms.
- Length of the net is provided according to your specifications.
- Type of net is determined according to the specificity of the oil spill type.
- Service staff can walk on the cubes on the water and therefore provide service / maintenance without removing the whole system.
- Sea life is preserved at its best on the long run since service staff can lift up the net if oil is not expected in the near vicinity to allow sea life passageway, and pull down the net whenever oil spillage is expected.
- The cubes system can be then reused for many years, not only as containment booms, but also can be used in many other applications such as modular floating pontoons and platforms, marina harbors, floating helicopter landing pads, bathing platforms, sea pools, dry docks for PWC and motor boats, and also for events such as floating stages, sets, platforms, sporting events, fireworks, aquatic games....
- Low cost maintenance.
- 100% recyclable.
- Environmentally friendly.
- Choose your color.
- Patented.

## CONTAINMENT BOOMS

This system has been **certified and approved by the French government** during the oil spillage of the Tanker "Prestige" in **2003**. (Out of 8 spillages disasters worldwide, France had a total of 4 along its coasts, and therefore the French people have been able to develop the most advanced solutions worldwide).

Our system really is the most efficient and reliable system in preventing the pollution to the coasts.

*Containment boom with chandeliers + net – Vue on land*  
*Length of the net is provided according to your specifications.*  
*Type of net is determined according to the specificity of the oil spill type.*
